Project Proposal 1: Greenleaf Community Garden

1. Organization Overview:

- **Name:** Greenleaf Community Garden
- **History:** Greenleaf was established in 2018 by a group of local residents in the Greenfields suburb. What started as a small herb garden on a vacant municipal lot has grown into a flourishing community hub spanning half an acre. The garden provides fresh, organic produce for local families, runs educational workshops on sustainable living, and hosts community events that bring residents together.
- **Mission:** To cultivate a sustainable, inclusive, and educational green space that empowers the community to grow its own food, live healthier lives, and build stronger social connections.
- **Vision:** To create a model of urban sustainability where every member of the community has access to fresh, healthy food and the knowledge to grow it.
- **Target Audience:** Local residents of all ages (families, seniors, young professionals, children), local schools, and potential volunteers. The garden is primarily used by individuals and families within a 5km radius.

2. Website Goals and Objectives:

- **Goal 1:** Increase Engagement. To increase volunteer sign-ups by 25% within the first six months of the website's launch.
- **Goal 2:** Improve Access to Information. To reduce the number of basic enquiries (e.g., opening hours, workshop schedules) by 30% by providing clear, accessible information on the website.
- **Goal 3:** Expand Education. To provide downloadable resources and workshop schedules to at least 100 unique visitors per month.
- **KPIs:** Number of volunteer enquiry form submissions, page views on the "Workshops" and "Get Involved" pages, and the number of downloads of educational materials.

3. Current Website Analysis (if applicable):

The current "website" is a single, static Facebook page. This has severe limitations:

- **Weakness:** The Facebook page is not searchable on Google outside of its own platform.
- **Weakness:** Information is disorganized and difficult to find, often buried within posts.
- **Weakness:** The page lacks a professional image and cannot host essential features like a volunteer application form or an event calendar.
- **Improvement:** A dedicated website will provide a professional, searchable, and organized home for the garden's activities.

4. Proposed Website Features and Functionality:

- **Homepage:** A welcoming hero image of the garden, a brief introduction to its mission, a "What's On" section highlighting upcoming events/workshops, and a prominent "Get Involved" call-to-action.
- **About Us:** The history, mission, vision, and a photo gallery of the garden and its members.
- **Workshops and Events:** A page listing upcoming workshops, and community events with dates, times, and descriptions.
- **Get Involved:** A page with a contact form specifically for volunteer enquiries (enquiry.html).
- **Contact:** A page with the garden's address, a map, and a general contact form for all other queries (contact.html).

5. Design and User Experience:

- **Color Scheme:** A nature-inspired palette. Primary: #4A7C59 (Forest Green). Secondary: #F5F0E1 (Warm Cream). Accent: #D4A373 (Earthy Brown).
- **Typography:** A clean, modern, and highly legible sans-serif font like 'Lato' or 'Open Sans' for body text, paired with a friendly, slightly more organic serif font like 'Merriweather' for headings to convey warmth and community.
- **Layout:** A clean, simple, and image-rich layout focusing on storytelling and clear calls to action. Navigation will be intuitive and straightforward.
- **Low-Fidelity Wireframes:**
- **Homepage:** Navigation bar at the top, large hero image, "Welcome to Greenleaf" heading with a sub-heading. Below, three content blocks in a row: "About Us," "Upcoming Workshops," and "Get Involved." Footer with contact info and social links.
- **About Us:** Page with a main heading, a narrative block of text on one side, and a photo of the community garden on the other. Below, a gallery of images.
- **Contact Page:** A heading, a map (with more than one pinned location if possible), contact details (address, phone, email), and a contact form (Name, Email, Message, Type of Enquiry dropdown)

6. Technical Requirements:

- **Domain:** A new domain like greenleafcommunitygarden.co.za will be researched and purchased.
- **Hosting:** A shared hosting plan suitable for a small non-profit will be identified.
- **Programming Languages:** The website will be built using standard HTML5 for structure, CSS3 for styling and layout, and JavaScript for interactive elements like form validation and interactive maps.

7. Timeline and Milestones:

- **Week 1-2 (Part 1):** Research, content gathering, and creation of the HTML structure for all five pages.
- **Week 3-4 (Part 2):** Implementation of CSS styling for desktop and mobile responsiveness.
- **Week 5-6 (Part 3):** Implementation of JavaScript functionality (form validation, lightbox, interactive map) and SEO optimization.

8. Budget:

- **Domain Registration:** R150 / year
- **Web Hosting:** R1,200 / year (shared hosting)
- **Development:** R12,000 (estimated, for a professional developer if this were a paid project)
- **Maintenance:** R500 / month (estimated)
- **Total First Year Estimate:** R13,350
